# KLINGER Ballostar® KHI sealing system

## *Operational principle of the Ballostar® KHI sealing system*

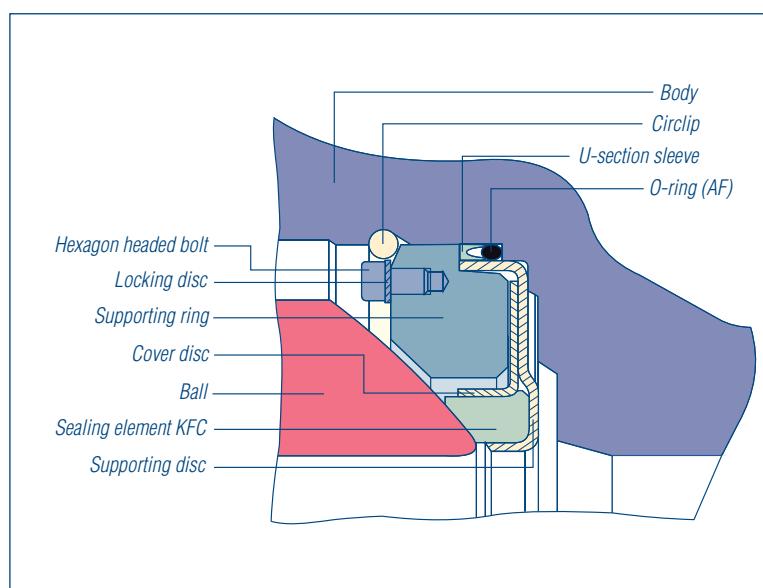

Due to the elastic system in the ball valve, leak-tightness is guaranteed at high as well as at low pressures. These two independently working sealing elements are preloaded during assembly. Furthermore they are driven against the ball by the differential pressure of the media. As it is a trunnion mounted ball valve, the pressure is not transmitted onto the seat rings. The valve can be used bidirectionally.

Expansion caused by heat is compensated by the elasticity of the sealing elements.

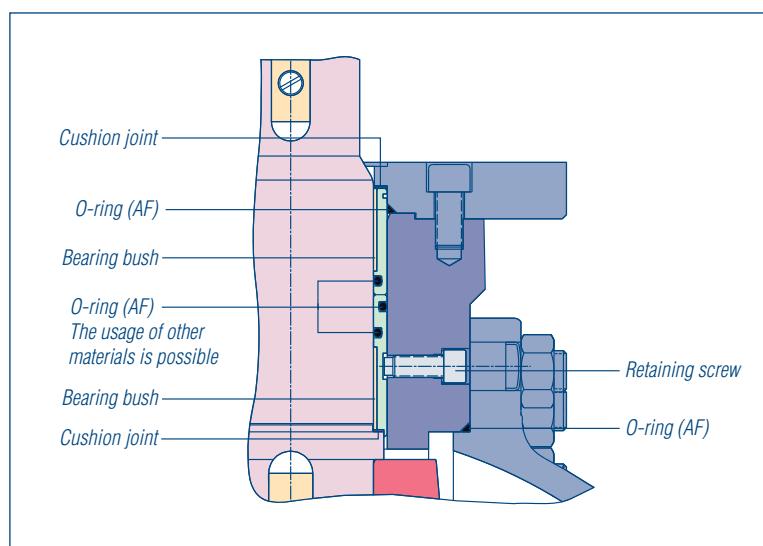

This elasticity provides continuously two main-sealing areas in the bore up to a certain pressure rate. With the fluid pressing onto the differential surfaces of the sealing element the seat ring is squeezed to the ball surface. As soon as pressure from the clearance volume is admitted to the ball and exceeds the nominal pressure, the ball pushes against the sealing ring on the outlet and keeps it tight to the atmosphere as well.

*Operational principle of KLINGER Ballostar sealing system*

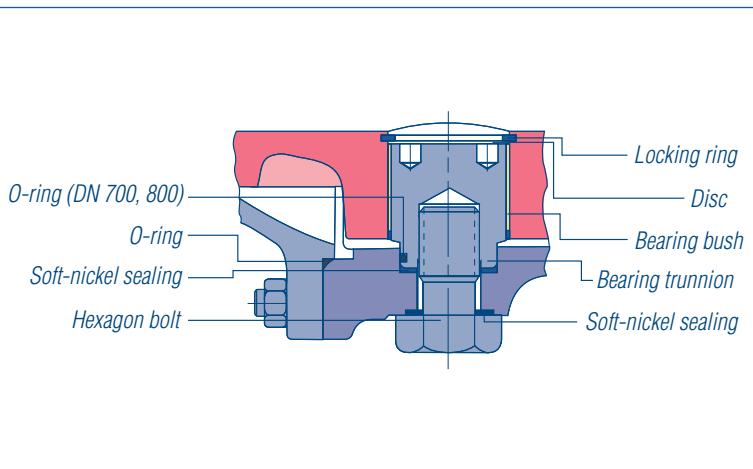

*Standard internal sealing system*

*Standard sealing system of the operating stem*

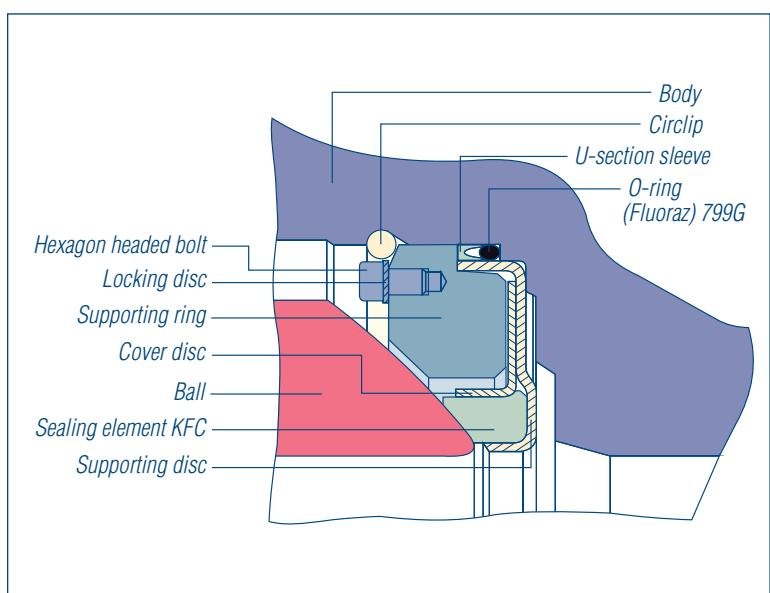

# KLINGER Ballostar® KHI sealing system

Bearing of the ball

## Function

When assembling the body and the connection piece the sealing system elastically preloads the ball. Two resilient sealing elements made of acid resistant steel with sealing ring and a sealing at the periphery of the supporting cushions joint, together with the ball, form a sealing system that works in both flow directions. A supporting ring protects the resilient sealing element from overstress. The sealing unit is held by a circlip.

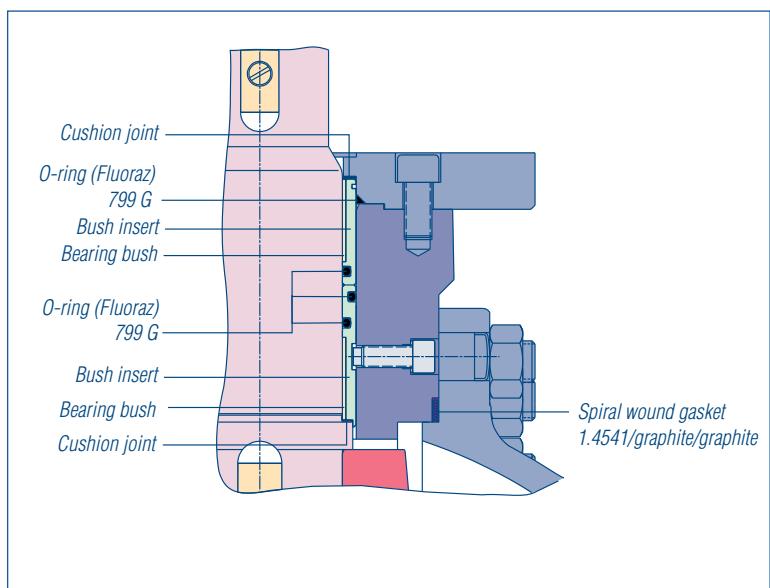

Internal sealing system for superheated water- and steam-applications:  
KHSVWI/KHWI

Because of the special sealing system the clearance volume of the ball valve can be drained, ventilated or relieved from pressure through a bleeding connection. This allows to check if both sealing rings are tight, after the pressure has been relieved (Block & Bleed).

It additionally allows repairs in a de-pressurised pipe section between two ball valves.

The Ballostar ball valve is acknowledged by TÜV as double acting shut-off valve in compliance to TRD and UVV (technical guidelines for steam boilers).

Operating-stem sealing for superheated water- and steam-application:  
Types KHSVWI/KHWI

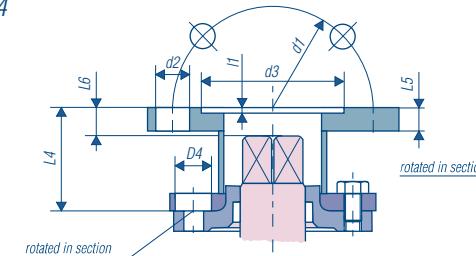

# Mounting options

**Ball valve DN 150, DN 200, flange connection acc. to ISO 5211 (F12, F14)**

Mounting with distance plate

# Automation

## Automation of valves

With automation continuously rising, different types of actuators are being applied for which extreme reliability is indispensable.

Different kinds of demands can easily be met with the help of actuators. Modular mounting and a wide range of accessory units which can be updated, make it possible to satisfy individual customer requests and adaptions to specific applications.

## Torques for actuator dimensioning

Standard design, KFC seat rings

Operating pressure 25 bar:

DN	Mt (Nm)
150	651
200	1069
250	2083
300	3710
350	5068
400	6251
500	8701
600	13020
700	19320
800	31395
1000	60000

Standard design, metal seat

Operating pressure 16 bar

DN	Mt (Nm)
150	882
200	1372
250	2646
300	4998
350	6958
400	8526
500	10668

### Please note that:

Generally the above specified values accord to the maximum breakaway (static) torques. At difficult operating conditions (pressure, temperature, media) and if the valve is operated less than 4-times a year we recommend to contact our technical department.

In such cases the corresponding torque value (Mt) has to be multiplied by a **safety factor** to choose the best suitable actuator.

Two types of automatic actuators are available:

**Directly operated** – the actuator is directly connected with the operating stem via coupling.

**Indirectly operated** – the actuator acts via intermediate gearing.

### Recommendation

If the manual force for operating is higher than 500 Nm we advise you to use a mechanical gear.

### Suitable actuators

Due to the flange connection acc. to ISO 5211 lots of different gears and actuators from various manufacturers can be easily attached to Klinger Ballostar KHI ball valves.

Standard design, KFC seat rings

Operating pressure 40 bar:

DN	Mt (Nm)
150	1260
200	1757
250	2905
300	5733
350	7063
400	7987
500	11655
600	15540
700	27510
800	36960
1000	75000

Standard design, metal seat

Operating pressure 25 bar:

DN	Mt (Nm)
150	1176
200	1764
250	3528
300	6272
350	8624
400	10192
500	14063

# Tests and approvals

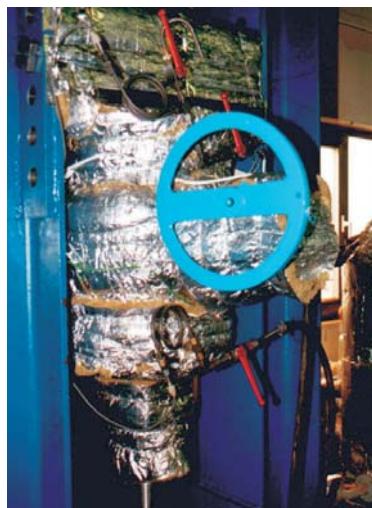

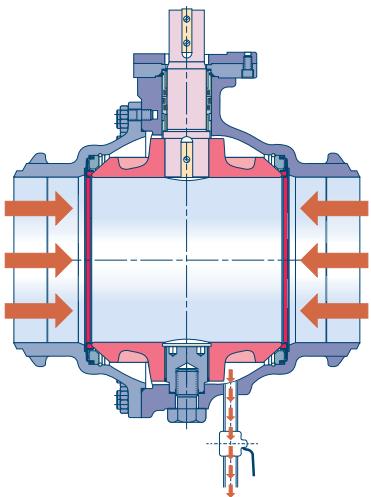

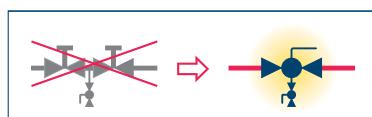

## Product approvals and component tests for KLINGER Ballostar KHI

	With regard to:	Testing company
1	Type approval KHI 150-600 application on ships	Lloyd's Register
2	Fire-safe test KHI 150.-.600 acc.to API 607/4. Ed	TÜV Austria
3	Approval of double shut-off with KHI (meets TRD 601-requirements)	TÜV Bavaria
4	Product approval ball valves and valves in Ukraine	OC Ketz
5	Product approval ball valves for tanks transboreing hazardous goods in Czech Republic	Drazni Urad
6	Release for drinking water	TGM Vienna
7	Compliance with requirements of PED 97/23/EC is certified	TÜV Austria
8	Component test acc. to EN 488 – KHSVI 300/250 fully welded	FFI-Hannover
9	Determination of flow resistance KHSVI 300/250 weld ends	Arsenal Research
10	Type approval acc. to EN 161	TÜV Austria
11	Gasapproval GK(SV)HI	ÖGVW
12	GOST-Approval for Ballostar ball valves	VNIIMASH

## Quality certificate: TÜV-Bayern confirms that KLINGER Ballostar can be used as a double acting shut off-device with intermediate relaxation.

The two independent sealing elements, one on each side of the ball with their preloaded springforce, keep leaktight at any time – bidirectional and in all

operating conditions – even with vacuum! KLINGER Ballostar makes up for two valves of any kind! This means both cost and space savings.

## KLINGER Ballostar: Test acc. to EN 488 at FFI

The district heating-research institute in Hannover (FFI) tested the KLINGER Ballostar ball valves acc. to EN 488. During this test the valves are exposed to different kinds of axial tensions and pressure loads at a temperature of 140. °C. The leak tightness of body, shaft and seat is tested and the operating torques are determined.

Ballostar KHI: Test acc. to EN 488

Ballostar KHI: Test acc. to EN 488

# KLINGER Ballostar® materials and coefficients

## Material code

Material code	Body	End piece	Internals	Colour of body
III	Cast iron	Cast iron	Without copper alloy parts	grey
VII	Cast steel	Cast steel	Copper alloy parts included	blue
X	Acid resistant steel	Acid resistant steel	Acid resistant steel, nuts and screws steel galvanized	unpainted
Xc	Acid resistant steel	Acid resistant steel	Acid resistant steel	unpainted

Primary criterion for the material code is the basic material of the body and end piece.

## Flow coefficients and zeta-values, full bore

DN	150	200	250	300	350	400	500	600	700	800	1000
$k_V$	4203	8131	13630	20590	29540	38582	59978	95695	118940	154245	242900
$\xi$	0,045	0,038	0,033	0,030	0,027	0,027	0,025	0,025	0,025	0,025	0,025

## Flow coefficients and zeta-values, casted version with reduced bore

DN	150/125	200/150	250/200	300/250	350/300	400/350	500/400	600/500	700/600	800/700
$k_V$	1642	2920	4640	6682	9256	12090	19604	28230	39186	51182
$\xi$	0,3	0,3	0,29	0,29	0,28	0,28	0,26	0,26	0,25	0,25

$\xi$  = Zeta-value

$k_V$  = flow coefficient ( $m^3/h$ )

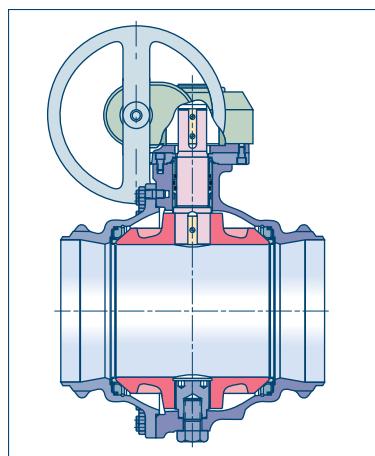

Graphs and exact flow calculations for all KLINGER valves are available on request.

The  $k_V$ -value represents a characteristic size for shut-off and control devices. This shows the flow rate of  $H_2O$  in  $m^3/h$  from 5–30 °C with a pressure difference  $\Delta p = 1$  bar at the valve.

Countries which use the inch as measuring unit the  $c_V$ -value replaces the  $k_V$ -value. This value indicates how many US gal. of water, at the temperature of 60°F and a loss of pressure of 1 psi, pass the valve every minute.

$$c_V = 1,1558 KV$$

$$k_V = 0,8652 CV$$

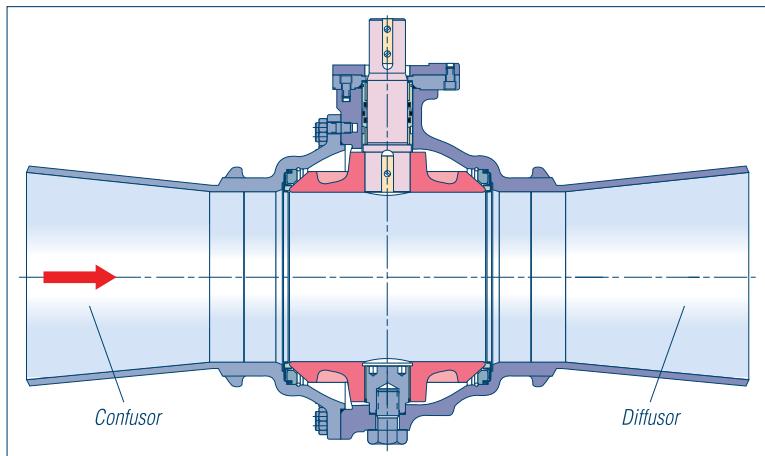

Variation 1: ball valve with reduced bore

Dimension: 800/700 cast version

$\xi$ -value: 0,25

$k_V$ -value: 51 182  $m^3/h$

Variation 2: ball valve reduced with welding cones

Dimension: DN 800/700

$\xi$ -value 0,189

$k_V$ -value: 58 919  $m^3/h$

Observe the relation:

$$\frac{k_V_{full\ port}}{k_V_{reduced\ port}} = \sqrt{\frac{\xi_{full\ port}}{\xi_{reduced\ port}}}$$

# The pressure/temperature-diagram helps you to choose the optimal ball valve

## Pressure-temperature limits

The PT-diagram clearly shows what impact the material of body, sealing, bearings and screws has on the application range of the ball valve.

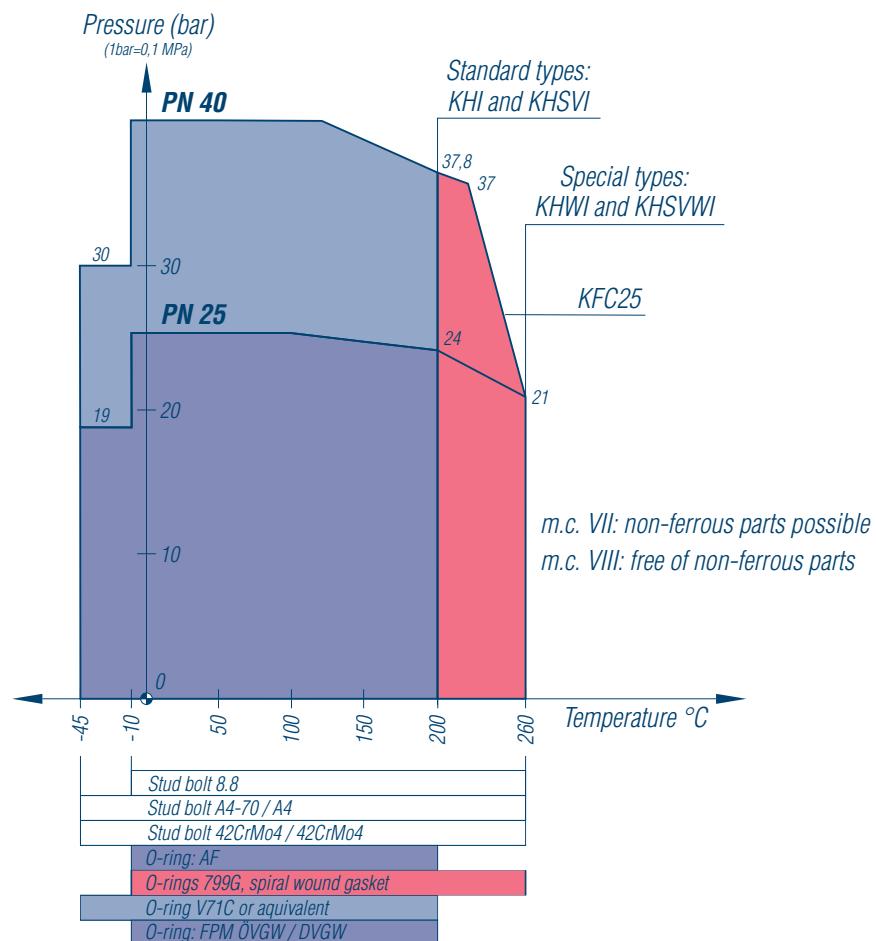

Place your operating point in the diagram field to see if the safety margins meet your requirements.

A decreasing operating pressure in the nominal pressure range increases the field of applications in the temperature range.

If you choose your ball valve in this way you optimize the economy of the valve.

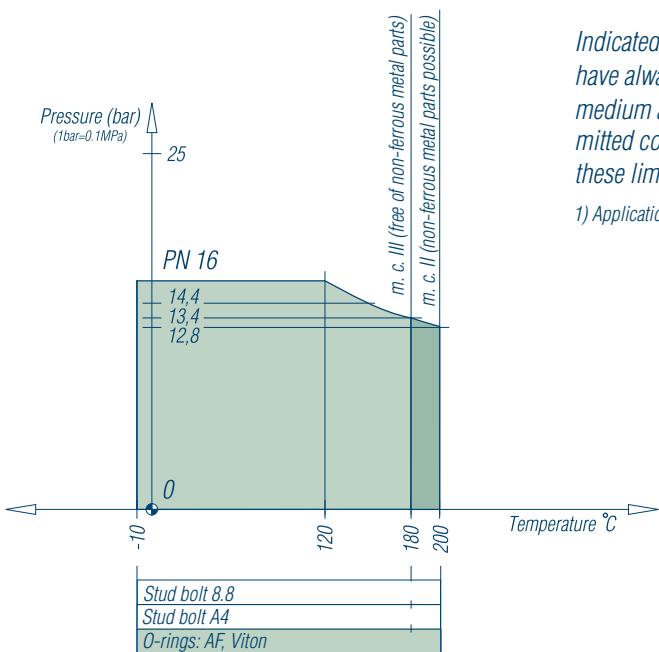

Indicated temperatures are limiting values which have always to be considered in connection with the medium and the respective operational pressure. Admitted continuous temperatures are always within these limiting values:

1) Pressure/temperature ratings acc. to EN 1092 / EN 10213

CAST STEEL 1.0619<sup>1)</sup>, material code number VII

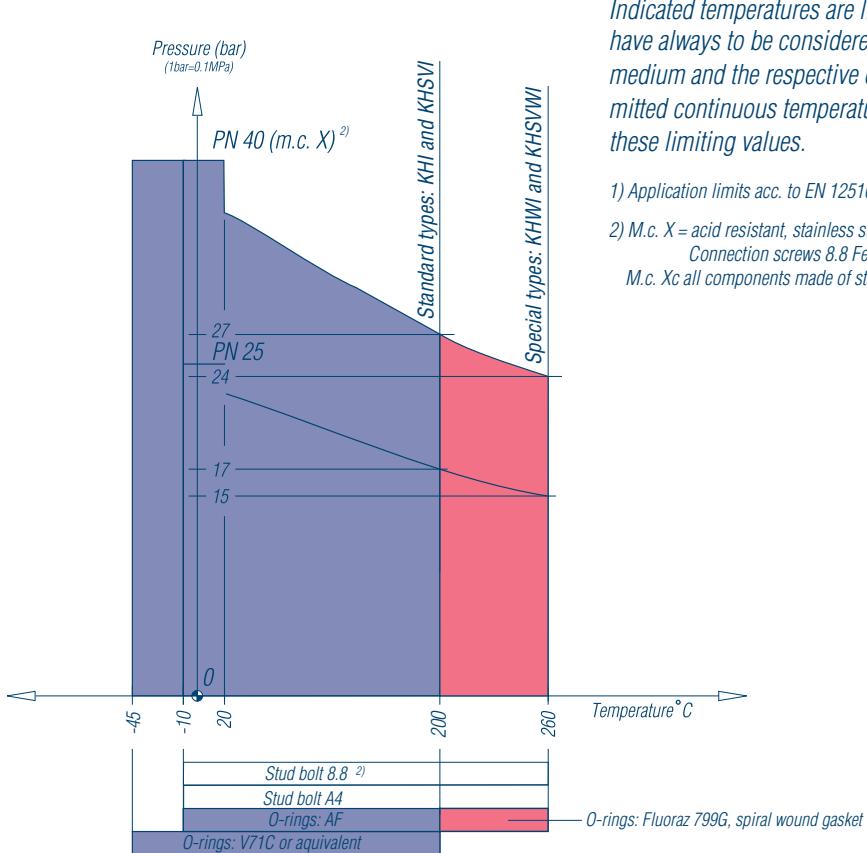

# Pressure/temperature-diagram

Indicated temperatures are *limiting values* which have always to be considered in connection with the medium and the respective operational pressure. Admitted continuous temperatures are always within these limiting values:

1) Application limits acc. to ISO 7005-2

CAST IRON 0.6025<sup>1)</sup>, material code II and III

Indicated temperatures are *limiting values* which have always to be considered in combination with the medium and the respective operational pressure. Admitted continuous temperatures are always within these limiting values.

1) Application limits acc. to EN 12516-1 (14 E0)

2) M.c. X = acid resistant, stainless steel:  
Connection screws 8.8 Fe/Ni 5P (or equivalent)  
M.c. Xc all components made of stainless steel!

45 Gear drive	

- 1) Not applicable for DN 150
- 2) Material 8.8 Fe/Ni 5P (or E2P with m.c. X)
- 3) O-ring compound of standard version
- 4) Hollow ball with guiding only at DN 400

## Suggested order specification

### Ball valve PN 25

Split body, full bore with supported ball,  
two independent sealing elements, main  
sealing element KFC is metallically en-  
closed on three sides, operating stem  
made of stainless, acid resistant steel  
1.4401 maintenance-free operating  
stem sealing made of AF, pressure  
possible on both sides, body and  
end piece made of acid resistant steel  
1.4408, overall length to EN 558-1/GR12,  
operated via worm gear.

Make: KLINGER

Type: KHI-Xc, for DN 150–400

### Ordering example:

**KHI 150-Xc – KFC/AF, PN 25  
with mechanical gear**

# KLINGER Ballostar® KHSVI ball valves

**KHSVI**  
PN 40  
material-code VII

## Suggested order specification

### Ball valve PN 40

Split body, full bore with diffusor/con-fusor and supported ball, two independent sealing elements, the main sealing element KFC is metallically enclosed on three sides, operating stem made of acid resistant steel, maintenance-free operation stem made of AF, pressure possible on both sides, body and end piece made of cast steel, butt weld end acc. to customer request, operated via worm gear.

Make : KLINGER

Type: KHSVI-VII

Leak tightness through the bore tested acc. to EN ISO 12266-1 P12.

External leak tightness testet acc to EN ISO 12266-1 P11.

Strength determined acc. to EN ISO 12266-1 P10.

Ball valves with extended buttweld-ends are available in all sizes. Upon customer request also available with reduced piece acc. to DIN 2616 T2 or in special sizes.

# Special design

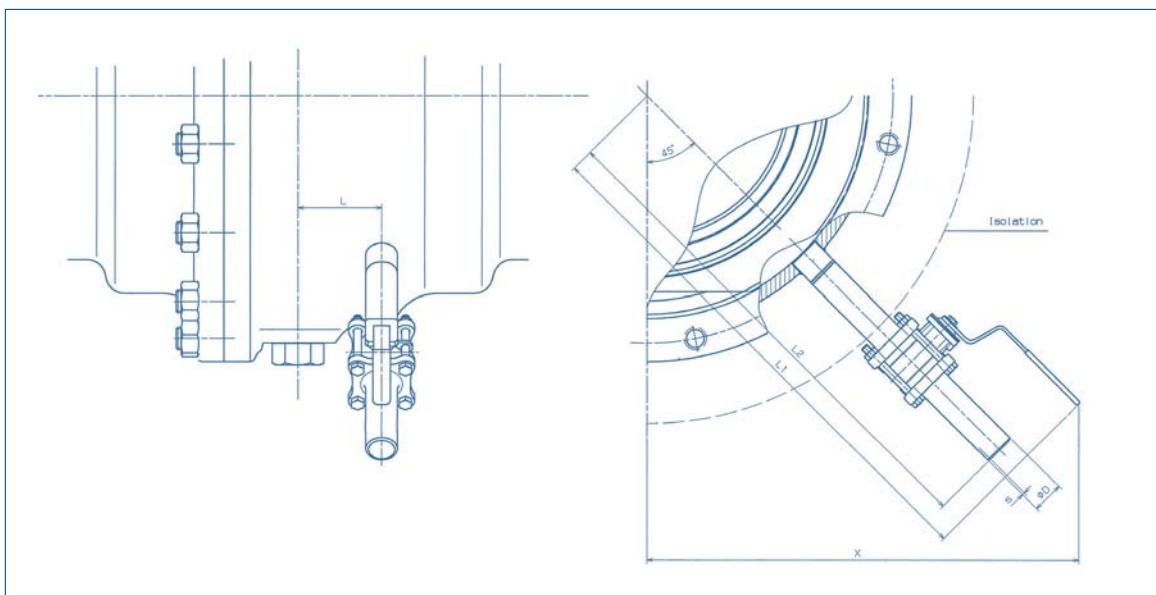

## Special design

Our main concern is the customer and his needs. In close cooperation we create innovative and individual solutions in order to satisfy every individual demand. Among other things we offer special designs and accessories as follows:

- Regulation blind (equal percentage, linear, u.a.)

- GKHI for gas application (ÖVGW approved): DN 150-800
- Vacuum application up to  $10^{-6}$  mbar l/s
- Valves for Benton'Air® pressurised slurry tunnel drilling machines
- Oxygen application
- Metal seated valves for abrasive medium
- Steam application
- Heating jacket
- Bypass design
- Drain-, air-relief- and flushing-connections
- Underground installation (extended operating stem)
- Fully welded design

## Drain cocks for ball valves DN 150–1000 PN 25/40

**Table of measurements (in mm)**

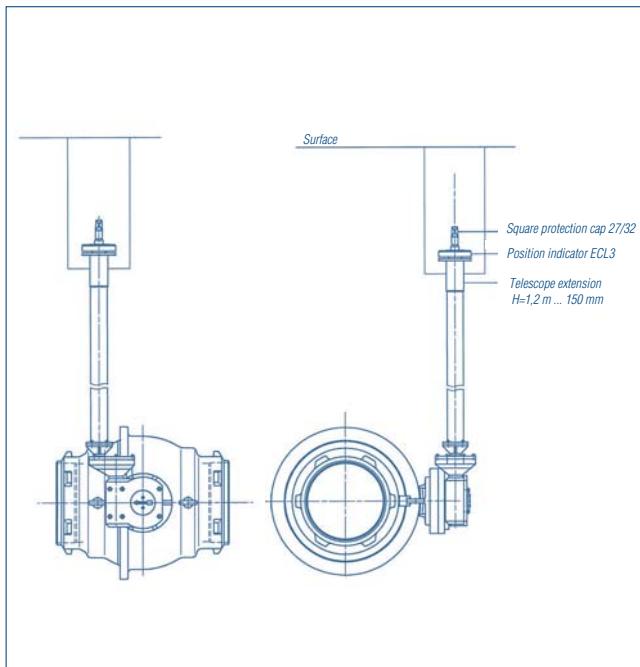

DN	L	L1	L2	X	D	S	Type

1000	250	1252	1065	985	77	3.5	KHA-SL 65 VIII PN40

- The drain cock should only be opened if the ball valve is closed.
- To avoid injury it is recommended to connect the drain cock to a drain pipe.
- Applied for superheated water it has to be considered that, depending on the valve size, the draining procedure lasts for some time.
- With the drain cock it is possible to check the "block & bleed" function, i. e. the ball valve can be tested whether it is leaktight.

# Special design

## Fully welded ball valves for pre-insulation: DN 150-800

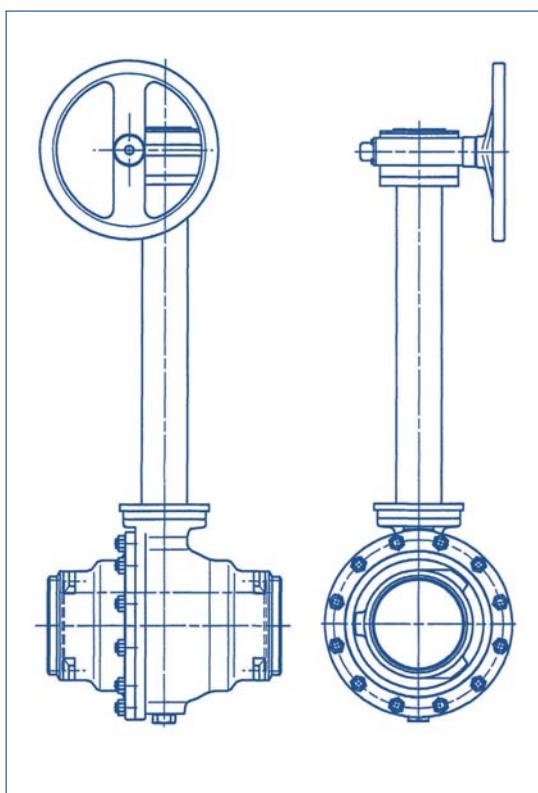

These ball valves are approved acc. to EN 488 (underground installation), upon request even pre-insulated – see adjoining pictures. If required equipped with telescopic stem extension.

Balostar ball valves pre-insulated, shown before and during the installation into a district heating network

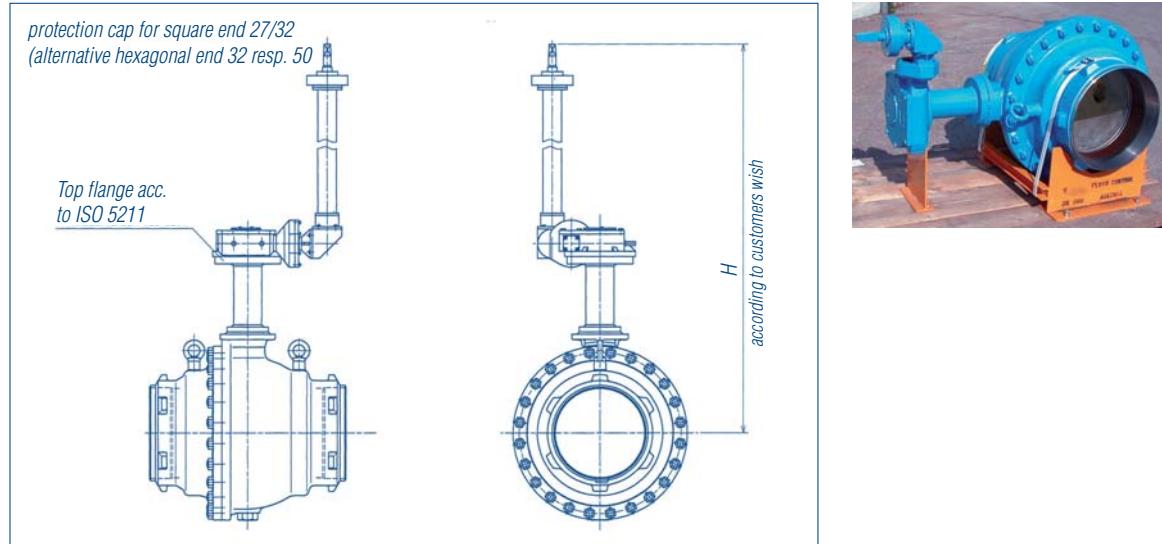

## Stem extension

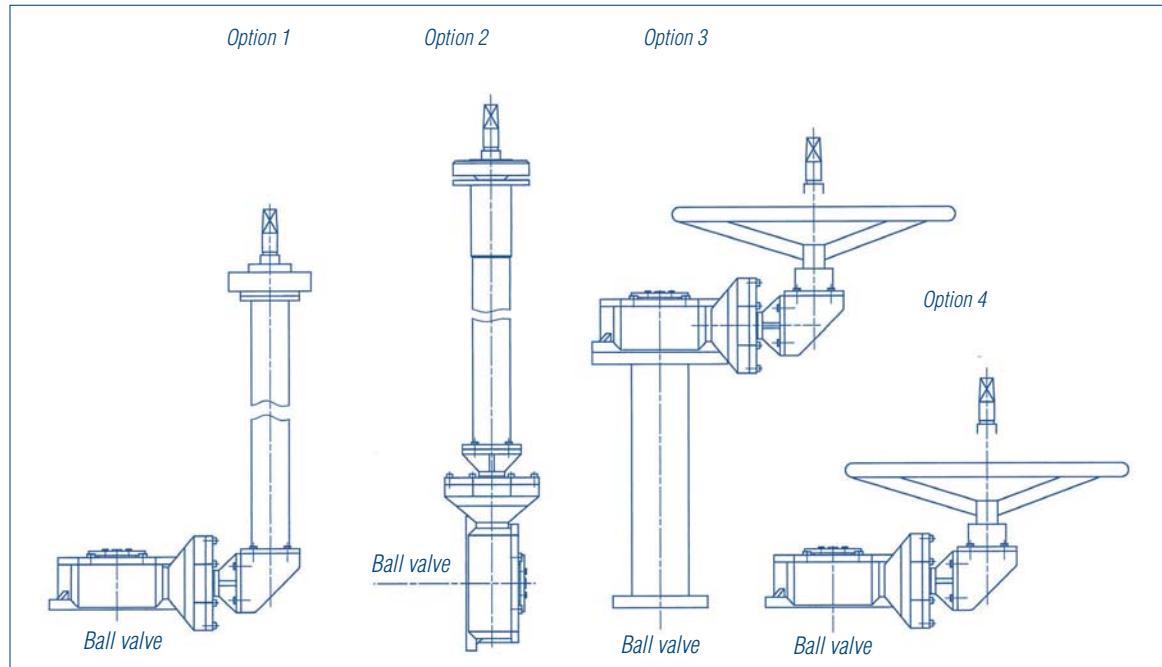

# Special design

## Underground version

Ball valves KHSVI 150 – 800 with insulating stem extension and buried fitting "RIGID" or "TELESCOPE" and mechanical gear plus position indicator

## Underground / shaft installation – operation variations

### Option 1

Mechanical gear with angular gear and position indicator rigid or telescope extension  
square 27/32 operated with T-key  
DIN3223 type C (alternatively hexagon square 32)

### Option 2

Mechanical gear with rigid or telescope extension  
square 27/32 operated with T-key  
DIN3223 type C (alternatively hexagon square 32)

### Option 3

Mechanical gear with rigid operation-stem extension with angular gear and hand-wheel operation or square 27/32

### Option 4

Mechanical gear with angular gear, hand-wheel operation resp. square 27/32

# KLINGER Ballostar® KHI ball valves

Metal seated M

## Economically optimised and future-proofed because of modular design

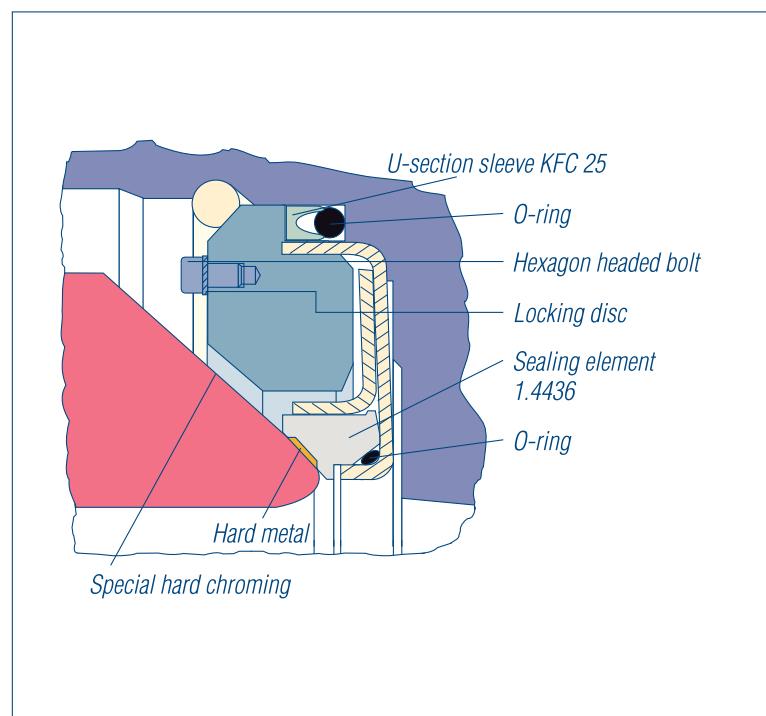

Due to the trunnion mounted ball, single sided loads, which are acting on sealing elements, are avoided. This guarantees high leak tightness and increases the service life. Worn sealing elements can be substituted on the spot, economically, without a specialist or KLINGER technician. Regarding stock keeping it means that you only have to store sealing elements or sealing kits and not complete ball valves.

Ballostar ball valves which are already on stock can be fitted supplementary with metal sealing elements. This ensures consistency of design throughout the plant.

## Special surface coatings of the ball

- Hard-chrome
- Chemical nickel
- Wolframcarbid

Special surface coatings should be choosed acc. to requirements of the operating media.

# Table of chemical resistance

The **recommendations** contained in the table should help you to choose suitable materials and types. We cannot assume a guarantee since function and durability of the products are largely dependent on factors over which the manufacturer has no influence.

In the event of specific conditions of approval, these must be observed. **Please contact us for any support.** Whenever solids are named in the list, what is meant are their aqueous suspensions.

Names of metallic materials, codes and code numbers according solutions or to DIN-standard.

# Applications

KHI ball valves in district heating system

KHI ball valves in district heating system

14.9 m in diameter is one of the biggest drills in the world, that is used to build the largest railway tunnel in the Netherlands. In this application KLINGER Ballostar ball valves are applied for Betonit injection and for the transport of mud. Our products meet the highest requested requirements under difficult conditions.

# Applications

Installation of KLINGER Ballostar KHSVI in the North of Poland

Final expection (pressure testing) of a KLINGER Ballostar KHSVI ball valve acc. to DIN 3230

Installation site of Stadtwerke Kiel (Kiel's municipal utility):  
Klinger Ballostar KHSVI and Monoball ball valves

KHI DN 400 equipped with pneumatic actuator

## Application example: Valves for oxygen in steel mills

Oxygen requires high demands for all components of a plant. Therefore all parts must be without any traces of oil or fat at any time in order to avoid self-inflammation.

KLINGER Ballostar ball KHI and KHA ball valves (for oxygen acc. to KLN 840) consisting of both steel casting and stainless steel, are famous for their high safety and the small space that is needed for installation.

# KLINGER product range

## Product range

### **Ballostar® KHA**

3-piece ball valve made of grey cast iron, steel or stainless steel

### **Ballostar® KHI**

2-piece ball valve with trunnion mounted ball, made of grey cast iron, steel or stainless steel

### **Ballostar® KHE**

2-piece ball valve with floating ball, made of steel or stainless steel

### **Monolith KHO**

One-piece fully welded ball valve made of casted steel

### **KLINGER Monoball®**

One-piece ball valve made of steel

### **KLINGER Ball-o-top**

Brass ball valves

### **Piston valves KVN**

made of grey cast iron, nodular cast iron, steel or stainless steel

### **KLINGERMATIC®**

Actuator for piston valves and ball valves

### **Reflex and transparent gauge glasses**

### **Circular sight-glasses**

### **AB cocks**

Packing-sleeve cocks and pressure-gauge cocks in brass, steel and stainless steel
